Multi Mount Clock and Thermometer

The Superleggera Motorsport Multi-Mount can be attached to most any surface in four unique ways: The simplest method is simply to **peel-and stick** using the cleverly recessed 3M™ waterproof tape. The stick-on method offers the fastest and easiest way to mount your Superleggera instrument. Want something more permanent? There are three additional mounting methods you can use. Use the mount's center hole with either: 1) a screw, 2) bolt, washer and nut, or 3) a toggle wing, (hardware not included) to enable simple and easy installation in just minutes. Great for dash mounting on your car, your boat or plane!

Makes for a professional looking "built-in" appearance.

PARTS LIST

| Qty. | Item |
|------|---|
| 1 | Surface Mounting Base with hole |
| 1 | Gauge (May be loose or already installed in Base) |
| 1 | Spare 3M™ adhesive |

INSTALLATION

1. Set time on clock. Remove the gauge from its base by sliding a fingernail between the gauge's outer ring and pry the gauge away from its mounting base. You can also push the gauge out from the base—to do this you will need to apply pressure through the hole in the back of the mount using a firm object such as a small screwdriver. Once the gauge is removed from its mounting base, you can now set the time as below.
2. (Set Clock) Once removed from its mounting base, pull out the crown and turn to set the time. Push crown back in. reinstall the clock by pressing it firmly back into its mounting base.
3. The unit can also be mounted in 4 ways described above. These instructions only address the peel and stick method.
4. Remove the film backing on the underside of the Mounting Base to expose the adhesive side of the sticker.

5. Position the Mounting Base in the desired location and press firmly.
6. Rotate the clock or thermometer so that it reads in the correct orientation.

Note: Some versions may come with an additional setscrew to hold the gauge in place.
